Hornung V, et al Silica crystals and aluminum salts have been shown to activate the inflammasome through phagosomal destabilization . Nat Immunol. (2008)
Ballesteros MN, et al One Egg per Day Improves Inflammation when Compared to an Oatmeal-Based Breakfast without Increasing Other Cardiometabolic Risk Factors in Diabetic Patients . Nutrients. (2015)
Blesso CN, et al Whole egg consumption improves lipoprotein profiles and insulin sensitivity to a greater extent than yolk-free egg substitute in individuals with metabolic syndrome . Metabolism. (2013)
Rueda JM, Khosla P Impact of breakfasts (with or without eggs) on body weight regulation and blood lipids in university students over a 14-week semester . Nutrients. (2013)

Egg intake does not change plasma lipoprotein and coagulation profiles
Down-regulation of the low-density lipoprotein receptor by dietary cholesterol
A double-blind, randomized, controlled trial of the effects of two eggs per day in moderately hypercholesterolemic and combined hyperlipidemic subjects taught the NCEP step I diet
Down-regulation of the low-density lipoprotein receptor by dietary cholesterol
A double-blind, randomized, controlled trial of the effects of two eggs per day in moderately hypercholesterolemic and combined hyperlipidemic subjects taught the NCEP step I diet
Eggs, serum cholesterol, and coronary heart disease
Effect of a High Saturated Fat and No-Starch Diet on Serum Lipid Subfractions in Patients With Documented Atherosclerotic Cardiovascular Disease
